# Marigold French Anemone Alumia™

## Culture Guide

Botanical name: Tagetes patula nana

Product form: Seed

Containers: Packs, Pints, Quarts, Gallons

Habit: Mounded

Garden Specifications

**Garden Height:** 10–12" (25–30 cm) tall **Garden Width:** 10–14" (25–35 cm) wide

Exposure: Full sun USDA zone: 10 AHS zone: 12–1

Product use: Packs, Containers, Landscapes

Germination Stages 1 & 2

**Germination time:** 3–5 days **Media temp:** 68–72 °F (20–22 °C)

Chamber: Optional

**Light:** Not required for germination

Seed cover: Yes

**Moisture level: 5 - SATURATED:** Soil is dark brown and shiny, free water is present at the surface of the soil, water drips freely from the bottom of the tray, and trays are heavy with a visible bend in the middle.

Rec. tray size: 288-cell tray

Seeds per cell: 1

Young Plant Production

Stages 3 & 4 **Temperature** 

**Day:** 66–68 °F (19–20 °C) **Night:** 66–68 °F (19–20 °C)

**Average daily temperature:** 67 °F (19 °C)

Lighting

Day extension lighting: Not necessary

**Light intensity:** 2,000–2,500 foot candles (400–500

micro mols)

**Day length response:** Day neutral **Daily light integral:** 10–12 mols/day

**Media pH:** 5.8–6.2

Media EC: SME 0.5 to 0.75 mS/cm

Fertilizer: 75–125 ppm N

**Moisture level:** Media should be allowed to dry between irrigations. Alternate between moisture level 2 and 4.

2 - MEDIUM: Soil is light brown in color, no water can be

extracted from soil, and soil will crumble apart.

**4 - WET:** Soil is dark brown but not shiny, no free water is seen at the surface of the soil, when pressed or squeezed water drips easily, and trays are heavy with a visible bend in the middle.

Pinching: No

**Plant growth regulators (PGRs):** Usually not needed. If necessary, spray with B-Nine® WSG at 1,500–2,500 ppm to control stem elongation.

**Plug grow time:** 3–4 weeks in a 288-cell tray **Comments:** Very easy to germinate on the bench. If seedlings get stretched, they can be planted deep at transplanting, and new roots will form along the stems. Do not hold too long in the plug tray or stress-induced flowering may occur, and plants will flower before bulking up to a satisfactory size.

### Finishing

**Temperature** 

**Day:** 66–68 °F (19–20 °C) **Night:** 62–64 °F (17–18 °C)

Average daily temperature: 65 °F (18 °C)

Lighting

Day extension lighting: Not necessary Light intensity: 4,000–6,000 foot candles Day length response: Day neutral Daily light integral: 12–14 mols/day

**Transplanting:** Transplant directly into the finished container. Place the rooting media slightly below the level of media in the container. Make sure that the root ball is covered and that the plug is situated in the center of the pot.

**Media pH:** 6.1–6.5

Media EC: SME EC: 1.5–2.1 mS/cm, PourThru EC: 2.3–3.2

mS/cm

Fertilizer: 125-175 ppm N

**Pinching:** No. Pinching is not recommended or needed.

Plant growth regulators (PGRs): Since Alumia is naturally compact, PGRs are not usually necessary. If needed, spray with B-Nine® WSG at 2,500-5,000 ppm.

**Tech tip:** To avoid iron and/or manganese toxicity, monitor and maintain media pH above 6.1.

CHRYSAL Try Chrysal Alesco®, a postharvest foliar spray, to protect ethylene sensitive crops during shipping and retail

**Moisture level:** Media should be allowed to dry between irrigations. Alternate between moisture level 2 and 4.

- 2 MEDIUM: Soil is light brown in color, no water can be extracted from soil, and soil will crumble apart.
- 4 WET: Soil is dark brown but not shiny, no free water is seen at the surface of the soil, when pressed or squeezed water drips easily, and trays are heavy with a visible bend in the middle.

**Common pests:** Aphids, Whiteflies, Thrips, Spider mites, Leafminers Common diseases: Pythium, Botrytis, Bacterial leaf spot, Alternaria leaf spot

#### Scheduling

Size	Crop Time	Plants Per Pot
Packs	3-4 weeks	1 ppp
Large Packs	3-4 weeks	1 ppp
1.0 pint (4 inch)	3-4 weeks	1 ppp
1.0 quart (4.5 to 5 inch)	5-6 weeks	1–2 ppp
1.25 to 2.5 quart (5.5 to 6.5 inch, trade gallon)	5-6 weeks	2–3 ppp

Estimated finish crop time is from transplant of a 288-cell tray and finished at an average daily temperature (ADT) of 65 °F (18 °C).

#### Example crop schedule for a large pack

Weeks From Transplant	Description
2 weeks	Check media pH and adjust if under 6.1
5 weeks	Ready to ship
